

CLAIMS

1. A method for treating peach and nectarines trees infected with the fungal disease peach leaf curl caused by the *Taphrina deformans* fungus, said method including the steps of applying Carvacrol to the infected trees to cure the disease.
2. The method recited in Claim 1, including the additional step of applying the Carvacrol while the trees are infected so as to cure the disease and thereby save the current year's fruit crop.
3. The method recited in Claim 1, including the additional step of applying the Carvacrol to the infected trees in the form of oregano oil.
4. The method recited in Claim 1, including the additional step of applying the Carvacrol to the infected trees in the form of thyme oil.
5. The method recited in Claim 1, including the additional step of applying the Carvacrol as a spray containing water according to the ratio of 6-7ml Oil of Oregano for each gallon of water.
6. The method recited in Claim 1, including the additional step of applying the Carvacrol as a spray containing water according to the ratio of 7.5-8.5ml Oil of Thyme for each gallon of water.
